

Prolixe S e r v e r

How to automate OpenVPN on Windows

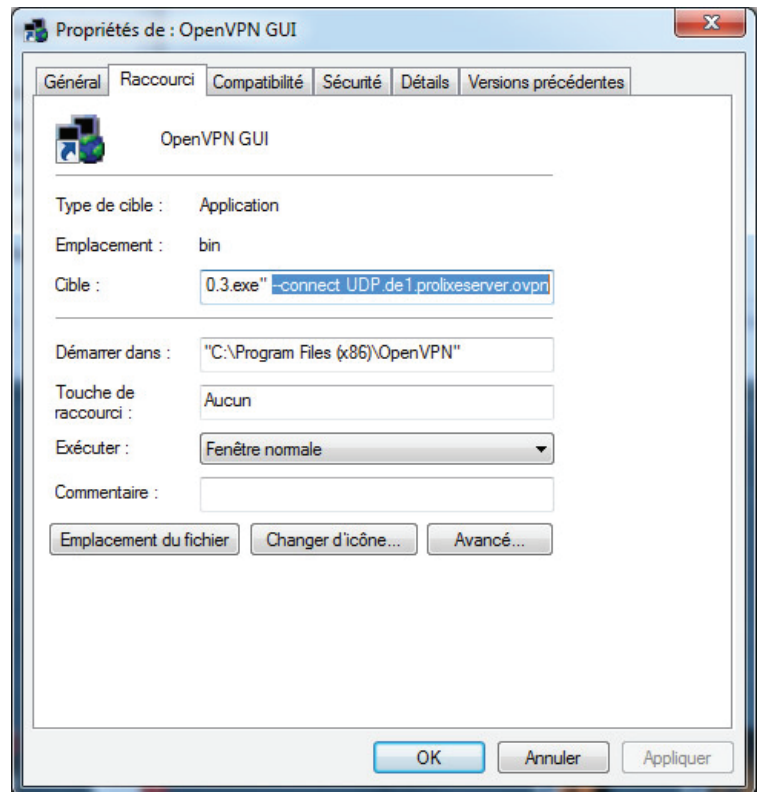

Create a shortened OpenVPN icon on the desktop, and made right click "Properties" in the path in the Target add following one of the three servers in TCP or UDP :

```
--connect UDP.cz1.prolixeserver.ovpn  
--connect UDP.de1.prolixeserver.ovpn  
--connect UDP.de2.prolixeserver.ovpn
```

If you use Emule select TCP modes :

```
--connect TCP.cz1.prolixeserver.ovpn  
--connect TCP.de1.prolixeserver.ovpn  
--connect TCP.de2.prolixeserver.ovpn
```

Confirm to close the "Properties" window and move the OpenVPN icon in the "Start" located in the "Start" menu in Windows.

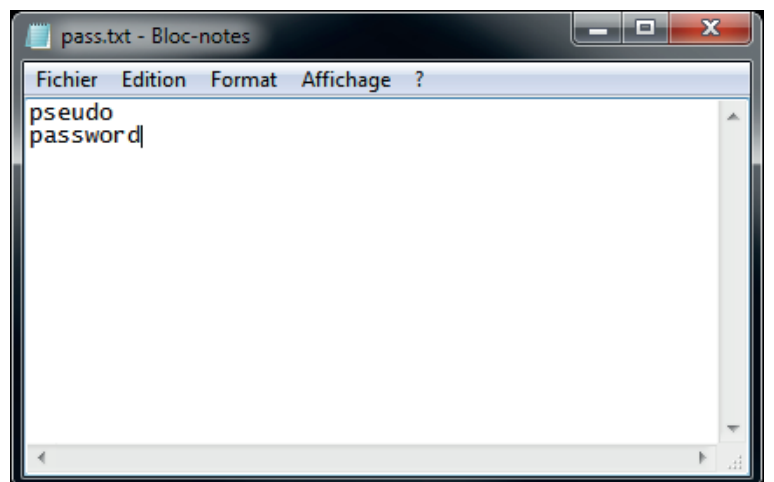

Now go back to the OpenVPN "config" folder located by default in :

[C:\Program Files \(x86\)\Openvpn\config\](C:\Program Files (x86)\Openvpn\config\)
or <C:\Program Files\Openvpn\config\>

create a "pass.txt" file and enter your username and password user by making a return to the line between the two.

Save and close the file.

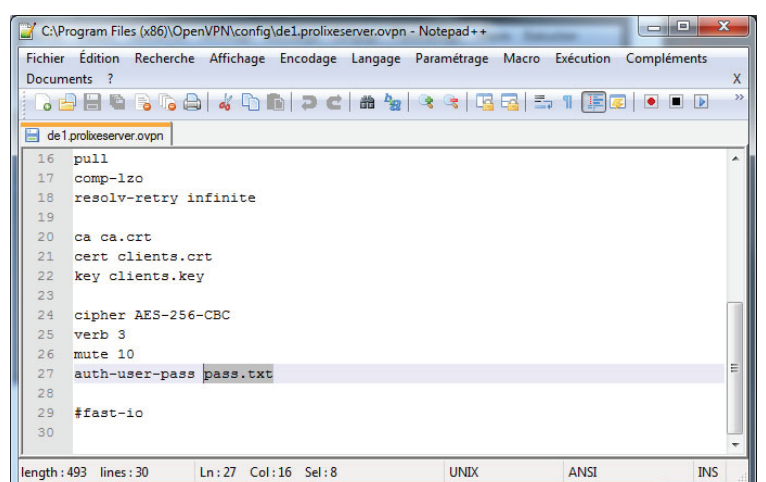

Also in the "config" folder craft with a text editor, one of OVPN files depending on what you selected above :

```
"TCP.cz1.prolixeserver.ovpn"  
"TCP.de1.prolixeserver.ovpn"  
etc...
```

Find the line "auth-user-pass" and add after "pass.txt" like this:

```
auth-user-pass pass.txt
```

If you do not have to restart Windows for the test.
