How to Install VPN on Windows

Install OpenVPN depending on your version of Windows
[openvpn-install-2.3.4-I001-i686.exe](#) for windows 32bit or
[openvpn-install-2.3.4-I001-x86_64.exe](#) for Windows 64bit

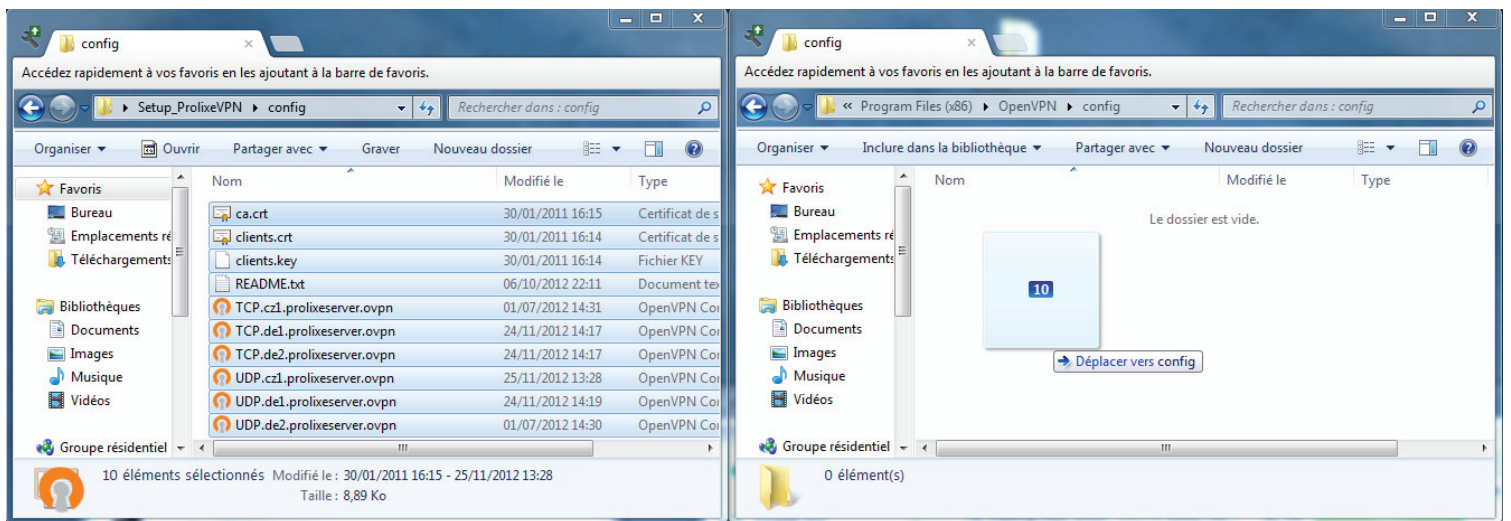

For users of Mac OS [openvpn-connect.dmg](#) or [Tunnelblick_3.2.9.dmg](#), and Linux users you can easily find on the internet OpenVPN.

To have no problem to start the installation, done right click on the installation of OpenVPN (32bit or 64bit) and click "Run as administrator".

After installation, copy or move the files from the "config" folder in the folder of the same name installed by default in :

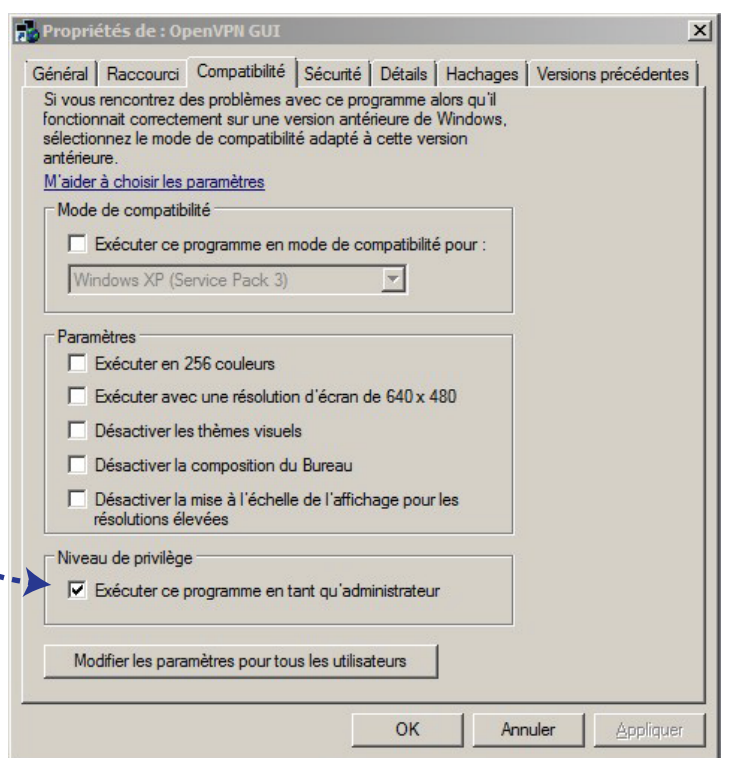

C:\Program Files (x86)\Openvpn\config\
or on Windows 32bit :
C:\Program Files\Openvpn\config\

A small change to make before running OpenVPN.

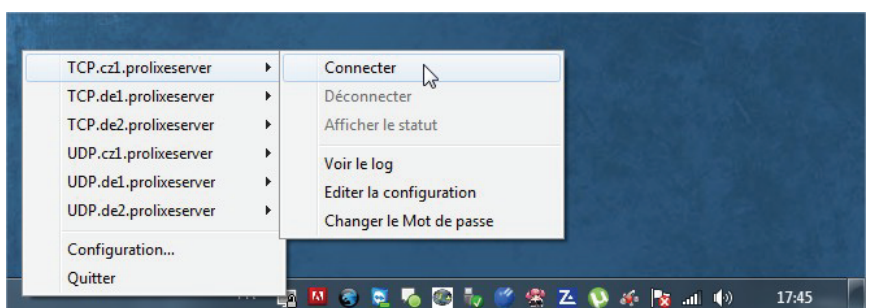

Right click on the icon shortened OpenVPN on the desktop and select "Properties."

In the "Compatibility" check «Run this program as an administrator», then close the window by clicking OK tab.

Run OpenVPN using shortened icon on the desktop, a new icon appears in the Windows taskbar at the bottom right of your desktop, right-click it and then connect to one of the three VPN TCP or UDP modes and enter your Username and Password.

FINISH

Do not forget to allow your firewall (if you have one) to run OpenVPN on your network. Also check that the date and time of your PC are correct.

For holders of a PAYPAL account

WARNING, Paypal checks your IP every time you connect. To avoid getting restrict your account, do not log in to your Paypal account with a different IP too often.
